We are requirement DC motor as per existing motor specification for Development of 1000kW DC motor. SPM require existing motor one to one interchangeable as per our existing motor specifications.

#### Requirement of Cooling arrangement:

##### External Separate Air/water heat exchangers Mounting:-

Ø Two constant speed fans provide air circulation for the outer and inner circuits. A totally-enclosed motor with an air/water heat exchanger is recommended for polluted operating environments. The heat exchanger unit, which is supplied separately, is located on top of the motor as standard. Unless otherwise stated on the delivery orders, the cooling equipment must always be installed so that the cooling air enters Motor at the N-end (Non drive-end).

Ø The operation of these motors requires special care since the cooling air flows in a closed loop. The smallest particles of carbon dust produced by the brush wear may pass through the filter and is circulated inside the motor and can settle on the windings, so affecting the ground insulation level.

Ø Outer circuit: Ambient air is forced through the heat exchanger by a fan. For motors with low loads or low ambient air temperature a thermostat control is recommended.

Ø Inner circuit: A constant-speed fan circulates the internal cooling air. A polyamide filter is provided to filter out carbon dust. A second filter is included for leakage air.

Ø If the heat exchanger is provided with a filter monitoring device, normal pressure drop when the filter must be changed is 200 Pa (normal set point for filter monitor higher due to measuring over the cooling coil and the filter). Use filter type EU3 according to Eurovent 4/5 or similar filter with efficiency 85% according to Ashrae 52-76. Do not use a filter with higher efficiency due to its higher pressure drop.
